Fawzan Adam

Computer Systems Technician | IT Support Specialist | Network Technician

fawzanadam.fa@gmail.com | Welland, Ontario | linkedin.com/in/fawzan-adam | fawzanadam.github.io | Open to Remote, On-Site & Relocation

PROFESSIONAL SUMMARY

Graduating Computer Systems Technician (Network & Cloud Technologies) from Niagara College with extensive hands-on experience deploying enterprise IT infrastructure from scratch. Built a complete production equivalent environment on a physical blade server running VMware ESXi with 20+ simultaneous VMs including Windows Server 2025, pfSense with IPsec site-to-site VPN, TrueNAS storage, GLPI ticketing system, PBX, in-house email, Nextcloud, and Zabbix monitoring. Seeking a Help Desk, IT Support, or Network Technician role where technical depth meets clear communication and fast problem solving.

TECHNICAL SKILLS

Virtualization: VMware ESXi, VirtualBox 20+ concurrent VMs on bare-metal blade server

Networking: TCP/IP, DNS, DHCP, VLANs, subnetting, pfSense, IPsec site-to-site VPN, WireGuard, Tailscale

Storage & Backup: TrueNAS (NAS/iSCSI/SMB/WebDAV), Veeam Backup & Replication Enterprise

Monitoring & ITSM: Zabbix (7 live hosts, real-time alerting), GLPI ticketing system

Tools: Wireshark, PuTTY, RDP, SSH, nslookup, ipconfig, gpresult, Event Viewer, GPMC, Wireshark

Operating Systems: Windows Server 2025/2019, Windows 11/10, Ubuntu Server, Linux CLI

Active Directory: AD DS, Group Policy (GPO), OU structure, user/group management, domain services

Services: HMailServer, RoundCube Webmail, Nextcloud, Guacamole VDI, PBX phone system, Ollama AI

Hardware: PC diagnostics, POST/BIOS, component replacement, server hardware, cable management

Cloud & Remote: Guacamole VDI, Tailscale VPN, self-hosted cloud services, NAT port forwarding

PROJECTS & HANDS-ON LABS

Capstone: Full Enterprise IT Environment on Physical Blade Server

Niagara College | COMP1301 Cloud Systems Integration | 2026

- Designed and deployed a complete enterprise IT environment on a blade server running VMware ESXi with 20+ simultaneous VMs (157 GB RAM actively in use across the cluster)
- Configured Windows Server 2025 with AD DS, DNS, DHCP, and GPOs enforced across all domain-joined Windows 11 clients: applied security and software restriction policies enterprise-wide
- Deployed pfSense firewall with IPsec site-to-site VPN tunnels, WireGuard, granular LAN/WAN rules, and NAT port forwarding, simulating a secured multi-branch enterprise network
- Implemented TrueNAS with iSCSI, SMB, and WebDAV file shares; deployed Veeam Backup & Replication Enterprise for VM-level backup and recovery operations
- Built full communication stack: PBX (voice), HMailServer + RoundCube (internal email), Nextcloud (self-hosted cloud storage), Guacamole VDI (browser-based remote desktop gateway)
- Deployed Zabbix monitoring across 7 live hosts with real-time alerting; managed IT operations through GLPI ticketing system, replicating a real help desk workflow from open to resolution
- All services publicly accessible via pfSense NAT port forwarding live and demonstrated at fawzanadam.github.io

Active Directory & Group Policy Deployment

Niagara College | 2024

- Built AD DS environment with full OU hierarchy, user accounts, and security groups; enforced desktop and login policies via GPOs across domain-joined Windows client machines
- Validated policy application with gpresult and Event Viewer; documented domain join procedures and full troubleshooting steps

DNS & DHCP Server Configuration Lab

Niagara College | 2024

- Configured forward/reverse DNS lookup zones and DHCP scopes with exclusions and reservations across multiple virtualized client VMs in a structured test environment
- Diagnosed name resolution and connectivity failures using nslookup, ipconfig, and Wireshark; produced complete configuration and troubleshooting documentation

Hardware Diagnostic & Rebuild

Niagara College | 2024

- Performed full PC teardown and component-level diagnostics (POST codes, memtest86, HDD SMART data); identified failing RAM module and degraded HDD, replaced components, reinstalled OS and configured drivers
- Documented full-service workflow from intake to sign-off, mirroring a real IT help desk service ticket and resolution report

EDUCATION

Computer Systems Technician Network & Cloud Technologies

Niagara College, Welland, Ontario | 2024 – 2026

- Key Courses: Network Fundamentals, Network Services Administration, Cloud Systems Integration (Capstone), Cloud/Network Security & Fault Tolerance, Emerging & Cloud Technologies, Open-Source Networks & Applications, Scripting & Automation, Project Management, Business Technical Writing

CORE COMPETENCIES

Help Desk Support	Network Troubleshooting	Systems Administration	Documentation
Ticket management, remote desktop, user account admin, hardware swap-out, and clear user communication	LAN/WAN diagnosis, DNS/DHCP, firewall rules, VPN setup, Wireshark packet analysis	Windows Server, Active Directory, GPO, VM deployment, monitoring, backup & recovery	Service tickets, technical guides, network config docs, professional communication

ADDITIONAL

- Portfolio & Live Lab: fawzanadam.github.io 4 live services running on Capstone infrastructure, publicly accessible via pfSense NAT
- Availability: Immediately upon graduation (2026), open to remote, on-site, and relocation anywhere in Canada
